

SGA06
Engine Flush

Concentrated Formulation for Petrol and Diesel Engines

Features

- NEUTRALISES ACID RESIDUE
- REMOVES HARMFUL DEPOSITS
- IMPROVES OIL CIRCULATION
- CLEANS ENGINE IN 5 MINUTES
- CLEANS STICKY VALVES, LIFTERS AND PISTON RINGS

Benefits

Engine oils can form acids as a result of the combustion process and oxidation. Even after draining the engine oil and changing the filter, residual acid contamination can remain in the crankcase in sludge form which in turn can corrupt the protection properties of your new oil. Adding SilverHook Engine Flush to your used oil before draining helps neutralise acid, dissolves varnish and removes sludge that ordinary draining would leave behind whilst providing friction proofing during treatment.

Instructions for use

Bring engine to operating temperature then switch engine off. Add contents to used engine oil, restart engine and run at idle speed for 5 mins. Note: Do not drive the vehicle or rev the engine until used oil has been replaced with fresh oil. While engine is still warm, drain crankcase. Change oil filter and oil. Dispose of waste oil in accordance with local authority regulations.
